

A1.1 Informing ideas

Comparing modern and historical Approaches to image manipulation

Image manipulation

Historically, for an image to be edited or manipulated, there were different approaches to these. One of the major techniques used to edit or manipulate images was by using the darkroom. Another major way to achieve image manipulation is for the photographers used lenses to capture images to create visual effects. The lenses available historically were limited which meant photographers could only make an image different to an extent. Some of the lenses were wide angle lenses, macro lenses and portrait lenses. Photographers also used the different filters to create different effects. Filters were used to control the light that affected the final image. Some of the filters were UV filters, colour filters and chemical treatments. Photographers couldn't easily manipulate images so filters and lenses were crucial.

Darkroom: it was a way by which photographers used to manipulate images with no natural light. For them to do this effectively, there was a red safelight that did not affect the image but allowed photographers to see. This meant photographers practiced different techniques to make an image look different. A variety of the techniques are as follows double exposure, burning and dodging. Double exposure is a technique used to capture two images in one frame. This effect causes the image to overlap creating two images in one frame. Another darkroom technique is the burning technique. The burning technique consists of blocking light from an area while exposing the rest of the image to light. The aim of doing this is to darken specific areas of the image depending on how long there are not placed in light. Dodging is the exact opposite of the burning technique which is used to make an image brighter by keeping light from the specific area of the image.

Nowadays, photographers use photo manipulation software such Photoshop and Capture one which allows for advanced photo manipulation unlike the dark room techniques. This software allows for detailed editing. There are tools on such software that makes it easily done like layer masks, magic wand and quick selection. Dark room techniques required physical tools while this modern software allows for greater advantages. With software like photoshop, it allows for multiple images to be edited into one image using layers and some others. This would mean an image could created to look surreal. These tasks would be extremely undoable using the traditional techniques. Innovation of software allowed limitless creativity whereas traditional method was limited. Overall software like photoshop has expanded the creative and technical options of photo manipulation as it was done historically.

The development of computer technology has established a variety of techniques and effects that were not possible to achieve by traditional approach. For example, software like Adobe Photoshop allowed for precise image manipulation through the tools provided. Examples are layering as earlier mentioned, cloning and digital retouching. This would have been extremely difficult to been done by physical means. In film and animation industries, CGI (Computer-Generated Imagery) has transformed visual storytelling, allowing realistic environments and special effects that were nearly impossible to create. Historically, combining multiple images into one final image was difficult, it was done with physical cut and paste which was very fragile and time-consuming, whereas with software nowadays, there are unlimited layers, transparency and blending modes that makes it easy. In image manipulation, here are some examples of techniques and effects enabled by software that was not possible before computers; warping and liquify tools which distorted specific parts of an image while keeping the rest intact that helps reshape images. Vector editing and scaling tool which creates images

that can be scaled without losing its quality, before computers it was limited because resizing made images lose its quality.

In conclusion, software innovation overcomes the incapability of lenses, filters and darkroom. Although traditional techniques modify images with light, software applies non-destructive editing resulting for far greater control and creative freedom.

Interpret the impact of image manipulation.

Legal issues arise when a person violates laws established by authority which result in penalties. Legal issues involve laws like copyright and privacy rights whereas ethical issues involve the morality of right and wrong based on societal values. Ethical issues involve cultural sensitivity, truthful representation and informed consent. Both are crucial in image creation.

In image manipulation, photographers typically own copyright of their images while others need permission to use or reproduce them to protect individual or commercial reputation. They can generally photograph images in public places but on private property they require permission. In some areas of the world, photographing individuals can raise legal concerns under privacy laws like GDPR (General Data Protection Regulation). In image making or manipulation, photographers should focus on doing what is morally right. For example, it is legal to take images in public spaces but it is ethical to ask for permission especially in uncomfortable situations. Photographers should also avoid manipulating images in ways that are not true which mislead people such as altering body shapes. However, legally, altering images violates copyright especially without permission even when making minor changes. GDPR laws apply when manipulated images involve recognisable individuals possibly violating their rights. It is respectful to ask for consent even if it is technically legal. Ethics often shape laws.

In conclusion, image manipulation conveys legal and ethical challenges such as deceptive or alteration of images that lead to severe consequences including reputational damage and legal action

Merits and demerits of image manipulation

Image manipulation helps images look more polished and attractive which immediately grabs attention and encourages viewers to engage with the content such as social media posts and advertisement. It also gives images high quality which makes a brand more trustworthy and establish a recognized brand identity. Image manipulation enhances important features making it easier for customer to understand what makes it beneficial. Enhanced images of people and products creates positive impact by improving visual appeal and strengthening brand. As well as image manipulation is very beneficiary, it has disadvantages. Over editing a person or product appearance can make it appear different from the reality; doing this makes it hard to trust the brand or make the audience disappointed and feel misled. This causes audience to doubt the authenticity of the image. This would lead to a tarnished reputation and reduce customers. Another disadvantages of image manipulation are that it can cause ethical and cultural issues such as changing racial features or traditional clothing. These actions cause stereotypes. Manipulating images of people without their consents raises ethical and legal concerns; it creates a false presentation of the individual.

A1.2 Explore and develop problem solving skills

Client Brief

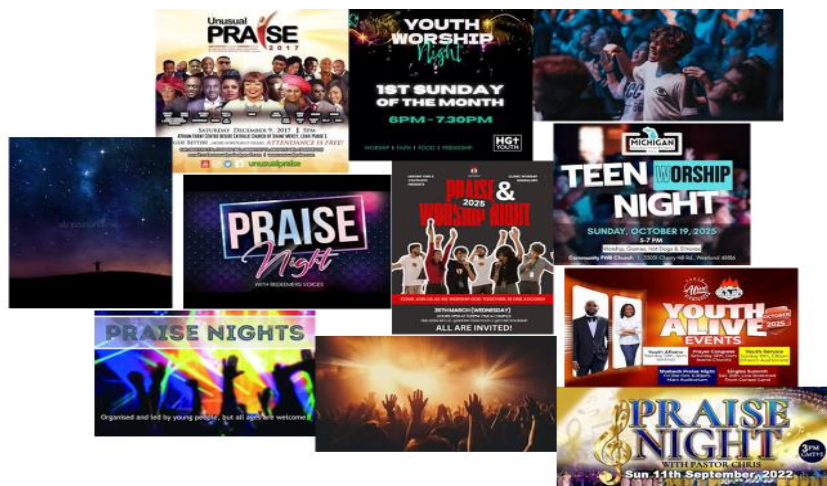

For this project, I will be creating an informative image. The informative image will be for a praise night event, focusing on appealing to toddlers, teens, teenagers, young adults and parents. Appealing to such a wide age group means that I must balance fun and maturity. Considering this ensure the

image communicates well to all age without looking childish or too formal. The image will convey a sense of warmth, embrace and safety through the use of inviting and soft colours. Warm and soft colours also support the welcoming atmosphere of a praise event. The image will contain key events details such as the activities, venue, time of the events which will be clearly created using an easily readable font size and style while maintain a visual appeal. Clear readability is essential because viewers will see the poster from different distance. The image will be made using vector so it can be printed for document. Using vector graphics is the best choice because it allows design to be resized for posters, flyers, or screen without losing sharpness. The image will need to appeal to both genders clearly and effectively. It will also need to be realistic. A possible challenge is presenting information clearly while keeping the design visually clean. To overcome this problem, I will use a visual hierarchy by making the title bold and other details small but in readable fonts.

A1.3 Develop creative technical skills

Developing concepts and generating ideas

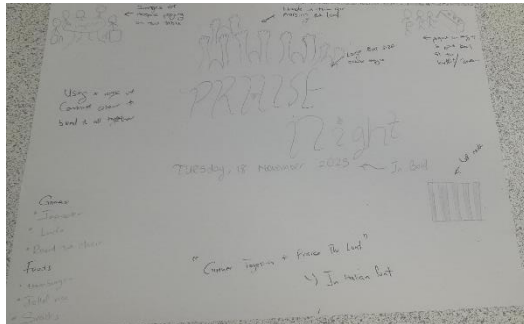

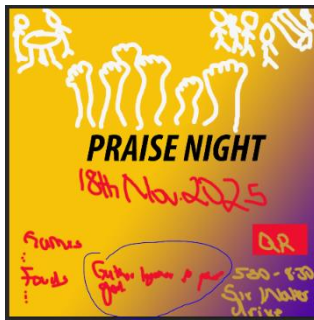

Develop concept ideas for your project by doing the following:

This is a mood board I have created containing praise night graphic images, similar to what I am producing. I have noticed that these graphic images use light warm colour to show presence through the images like blue and focusing on creating a clear understanding of the image by making the events clear and in bold text which I will be incorporating into my designs. Making this mood board has helped me create a clear understanding of the common designs I need to input into the design that I will be producing.

Pre-production

Praise Night Image

The first diagram showcases people at the top of each corner. The left corner is to display people playing game on a table like imposter or Ludo. The image will need to be photoshopped. It will also blend with the colour contrast of the background. At the right corner, it will display people being served at canteen or a

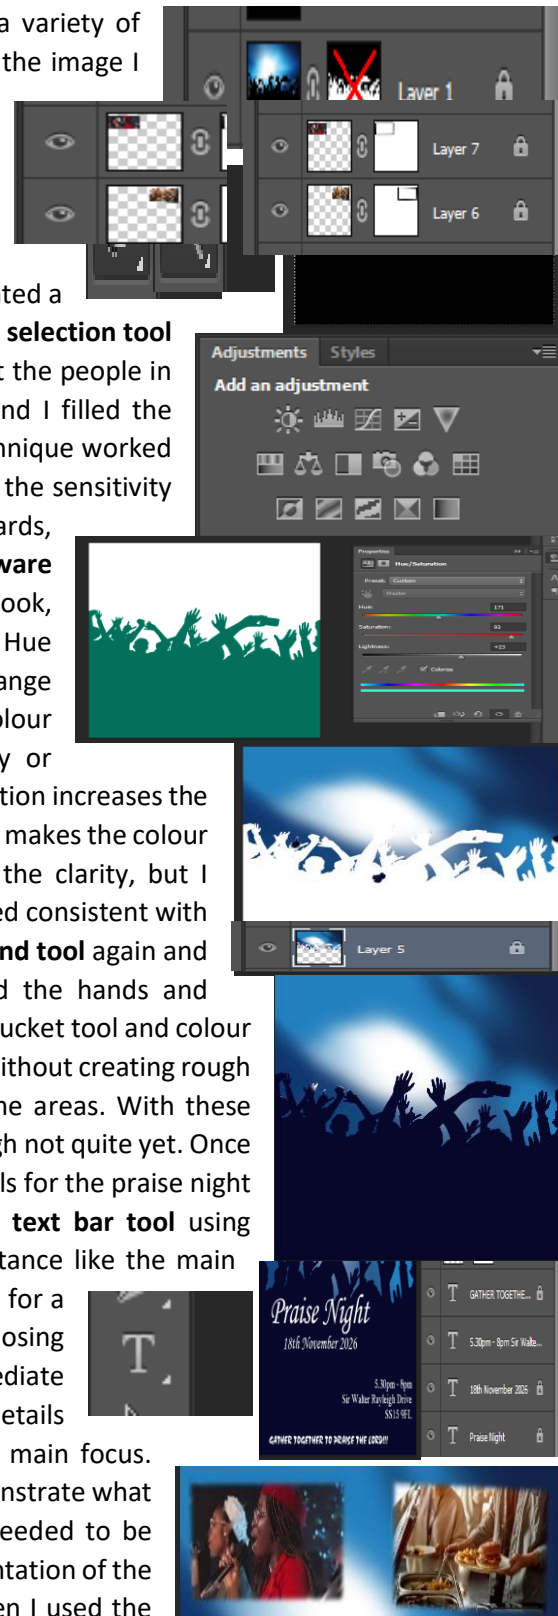

buffet which will also be photoshopped. And right at the centre there will be multiples of hands in the air signifying praise and just beneath that is the title of the event and the date of the events written in clear font style and size. A QR code will be displayed on the button right for confirmation of participation. And at the opposite side it will contain the activities of the events such as game and foods. But beneath the QR code will be time of the event and venue at which the event will take place. And at the bottom centre will be a text; 'Gather together to praise the lord' in Italian font. On the second diagram will be the same input but without the hand figures representing the praise but music instruments as they signify worship. The third is to just display everything detail in the centre of the image and add colours later on while the last image is a drawn sketch of what I would like for the image to look like.

When comparing designs, the first design is the best but it might be too overcrowded, the second design is too vague which may not appeal to the audiences and the third design kept everything centred but it lacked the visual energy needed. And the fourth design was the original sketch but there were not enough details on it to make it stand out. This evaluation helped me understand what was essential and help me know what things needed simplification before production.

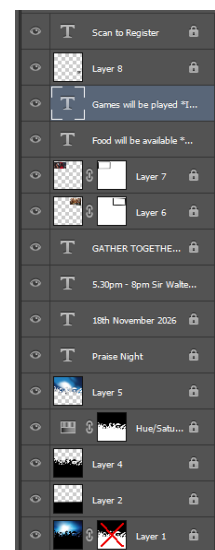

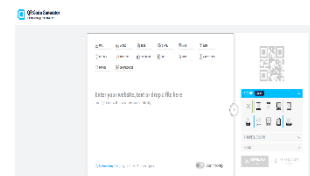

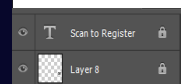

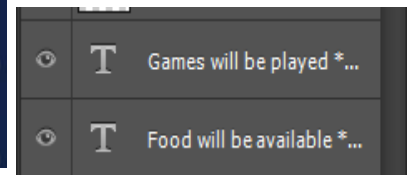

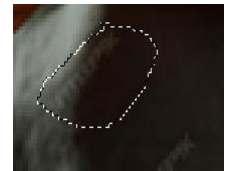

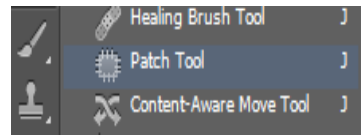

In conclusion, my final design for the praise night image will successfully communicate with its audience. By placing the event title at the centre, it instantaneously draws attention and becomes the main focus which is supported by the images that will be placed in the background of people praising and enjoying themselves which portrays a clear and spiritual atmosphere of the event. By positioning the event details in the bottom corners, I will be maintaining a readable message that is clear. Overall, the design choices I have decided to go with will allow the image to be visually engaging and effective in conveying the events message.

Production/development

During the production stage, I started by sourcing a variety of images that I could use for the poster. Once I found the image I wanted, I went into **Adobe Photoshop**, which is the digital software where all the designing processes took place. Firstly, I imported the image onto a new layer and locked. Locking the layer prevented accidental edits, which allowed me to work more efficiently without having to redo changes. I then created a new layer and I clicked on the **magic wand tool/quick selection tool** (select areas of an image) which allowed me to select the people in the imported image while keeping their positions and I filled the selection with my desired aesthetic (colour). This technique worked well for isolating objects but I had to carefully adjust the sensitivity to avoid selecting the background by mistake. Afterwards, I adjusted the image's hue and saturation in the **software adjustment panel** to give it a better-defined look, including adjusting the brightness and other settings. Hue and Saturation are image editing controls used to change the overall colour of an image: hue shifts the overall colour of the image and saturation controls the intensity or vividness of the colour. For example, increasing saturation increases the brightness of the colour and decreasing the saturation makes the colour duller. Adjusting the hue and saturation enhanced the clarity, but I tested several variations to ensure the colour remained consistent with the overall poster theme. Next, I went onto **magic wand tool** again and applied the same effect to the outer layer around the hands and coloured it to match my desired look using the paint bucket tool and colour tool. This method successfully highlighted the hands without creating rough edges, although I had to refine the selection in some areas. With these changes, the image began to look like a poster although not quite yet. Once I was satisfied with the image, I added the event details for the praise night which gave the design a poster-like look using the **text bar tool** using different font styles and size to portray their importance like the main message on the poster which was that the image was for a Praise Night to capture the viewer's attention. Choosing bold fonts for the main message draws immediate attention, while smaller fonts for secondary details maintained readability without distracting from the main focus. Additionally, I imported some images to visually demonstrate what would happen at the event. The images I added needed to be cleaned so they would blend in with the overall presentation of the poster. To do this I clicked on the **mask tool** and then I used the **colour tool** to show and hide areas of the image which made it blend easily with poster and then I used the **patch tool** to remove some sections from the images like words. To do this I drew around the section I wanted removed and dragged it to a cleaner area on the image which removed the section and afterwards I clicked on **CTRL+ T** which allowed me to transform the image, meaning it could be scaled to any proportion desirable. Masking and patching improved the cohesion of the

images, though some trial and error was needed to ensure natural blending. This taught me the importance of patience and precision in digital editing. Finally, I added some additional text to the poster. Afterwards I went into a software called **QR Generator** which allowed me to create a QR code that was placed on the image. Adding the QR code improved interactivity, but I tested placement to make sure it didn't interfere with visual hierarchy of the poster. Balancing this ensured simplicity for the audience. This was added to give viewers more information or any clarifications about the event. All of this was positioned on the image using the **move tool** to create balance, which allows for movement or images to be moved around while I locked the layer panels once each section was done to avoid any mistakes.

This is the image poster that was created. Based on the choices I made like using the colour blue to create different look, it made the work poster look like lighting and images of people which was intended for both genders and to appeal to toddlers, teens, teenagers, young adults and parents. Using blue created a calming and inclusive tone.

Post-production - testing and feedback.

For this project, I will be creating **an informative image** focusing on **appealing to toddlers, teens, teenagers, young adults and parents**. Considering this ensure the image communicates well to all age **without looking childish or too formal**. The image will convey a sense of warmth, embrace and safety through **the use of inviting and soft colours**. The image will contain key events details such as the activities, venue, time of the events which will be clearly created using an **easily readable font size and style** while maintain a visual appeal. **The image will be made using vector** so it can be printed for document. The image will need **to appeal to both genders** clearly and effectively. It will also **need to be realistic**.

Client's Question	Why am I asking this?	Designer's answer	Implication on project
1. Does the image appeal to toddlers, teen, teenagers, young adults and parents?	To gain an understanding of how the image will be presented.	Yes, it does	The poster can confidently target broad audience without needing multiple variations.
2. Does the image use inviting and soft colours?	To influence how the viewers will feel.	Yes, it does	The poster will portray comfort and positivity, which can trigger emotional connections with the viewers.
3. Are the texts on the image in easily readable font size and style	To ensure that everyone can read the text without strain.	Yes, it is	The poster will be accessible to all the viewers, young and older audiences.
4. Was the image made using vectors graphics?	To ensure that the image can be printed for publishing.	No, it is not	The poster may lose it quality when resized.
5. Does the image appeal to both genders?	To connect with many people as possible.	Yes, it is	This allows the poster to maintain an inclusive approach which helps brand identity.
6. Is the image realistic?	To avoid confusion and to build trust with the audience	Yes, it is	The means the poster will not lead to any misunderstanding and will support brand reliability.

In accordance with the brief, the image meets the required standards as it is realistic and appeals to both genders. The image also appeals to all the age groups it was intended for from toddlers to young adults and parents. The image is suitable to be published as it also uses inviting and welcoming colours such as blue for a spiritual presence. My design clearly communicates the information of a praise night and remains visually engaging all while maintaining a sense of embrace and safety.

Overall, the design is fit for purpose and is successful in meeting the aims of the client brief except in one category which is that the poster wasn't fully made using vector graphics because it includes photographs and raster effects. Although, it still uses vector elements such as texts and the QR code which makes it scalable and suitable for printing.

Comparison of Project in relationship to existing work

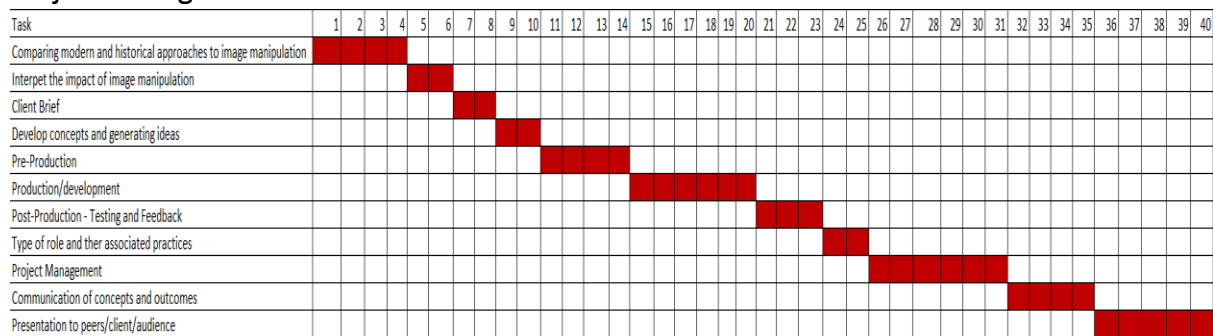

In comparison to the existing work, my poster shares several similarities between the existing work such as clear visual hierarchy, vibrant colour schemes and a sense of attracting attention both adhering to common design trends. However, there are key differences. My project is more professional and has a polished design layout with cleaner typography, whereas the other poster has a casual style with silhouetted imagery. My project successfully achieves a professional standard, showing a strong understanding of current design principles but with few adjustments to typography consistency the poster can reach high standards in its industry. However, the other poster lack visual readability due to smaller font size which affect its interactivity and engagement, while my poster is more suitable for publishing because I incorporated modern design elements such as QR code which improves user interaction and accessibility compared to the other poster. My poster uses a more united colour palette, whereas the other poster uses multiple styles which affects overall balance. The blue colour in my poster represents a calm and spiritual atmosphere, while the red colour in the other poster creates a more energetic and vibrant atmosphere. Additionally, the spacing in my poster creates a structural visual flow while the other poster appears more crowded in certain areas. Overall, the comparison shows that my poster achieves a higher level of professionalism through cleaner typography and modern design trends such as QR code. While both designs follow common visual trends and aim to attract attention, mine illustrates stronger readability and user interactivity.

A1.4 Professional skills and behaviours

Types of role and their associated practices

For this project, I worked independently. Some of the benefits of working independently was that I have the final decision on the project. Although I did most of the work on the project, I had help from a colleague who taught me how to use some tools on the software I was using on the project which is Adobe Photoshop. During this time I learned some useful skills on the software which is essential as a graphic designer. Although if I was working with a team, I would not have to bother because everyone is skilled in each required field of the project but I love to learn new things that's why I work independently and ask for help when needed which I did. However, there were some setbacks. I had no way of reviewing the project for mistakes such as typography. But fortunately, there was a client review and feedback and later on peer review. I only struggled because some aspects were not my expertise. But if I were to work with a team, there would be contrasting ideas which could lead to conflict which is why independence is freedom and creative control overall. In summary, working independently developed my skills and gave a creative freedom overall but lacked support which isn't generally a bad concern.

Project management

This is a board showcasing the all the task I did within the 40hours duration. The red colours represent the hours I spent on each section. The more the red colours in section the longer I spent on each section.

Asset Table

Assets	Properties	Source	Legal Issues	Use
	Original size Height: 6.02 cm Width: 8.47 cm	https://stock.adobe.com/bg/search?k=%2343705793&search_type=recent&search&asset_id=43705793	Need to consider for copyright and licensing terms.	Centre image being used to create the poster
	Original size Height: 22.07 cm Width: 44.79 cm	https://www.freepik.com/premium-photo/concert-musical-african-american_group_409452324.htm#fromview=crosssellingphoto	Need to consider for copyright and licensing terms.	To be used on the poster for demonstration at top left.

	Original size Height: 21.91 cm Width: 36.38 cm	https://www.freepik.com/premium-photo/man-picking-up-food-plate-buffethotel_136967144.htm#from_element=crosssellingphoto	Need to consider for copyright and licensing terms.	To be used on the poster for demonstration at top right.
	Original size Height: 8.04 cm Width: 8.02 cm	https://www.qr-codegenerator.com/	None	To be used on the poster for information enquiry.

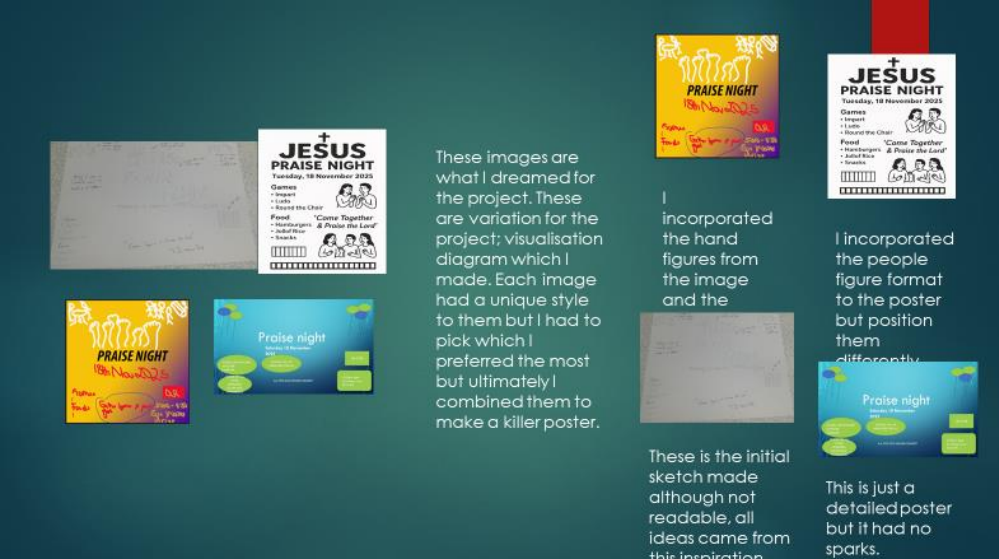

I have ensured that all images that were used in this poster were either self-created or sourced from licensed platforms. Most of the images were sourced from FreePik and Adobe stock. These platforms provide licensed content but not creative common licenses. The images are protected under international copyright law. By adhering to this legislation, the use of these images remains respectful and lawful.

A1.5 Presentation and review of final product

Communication of concepts and outcomes

These are images gathered across the internet that influenced the design process in the development of the project. As you can see this images really stand out. This made me realise that the project needed to stand out so it could be recognized. Using the images, I created ideas of what I wanted the project outcome to look like.

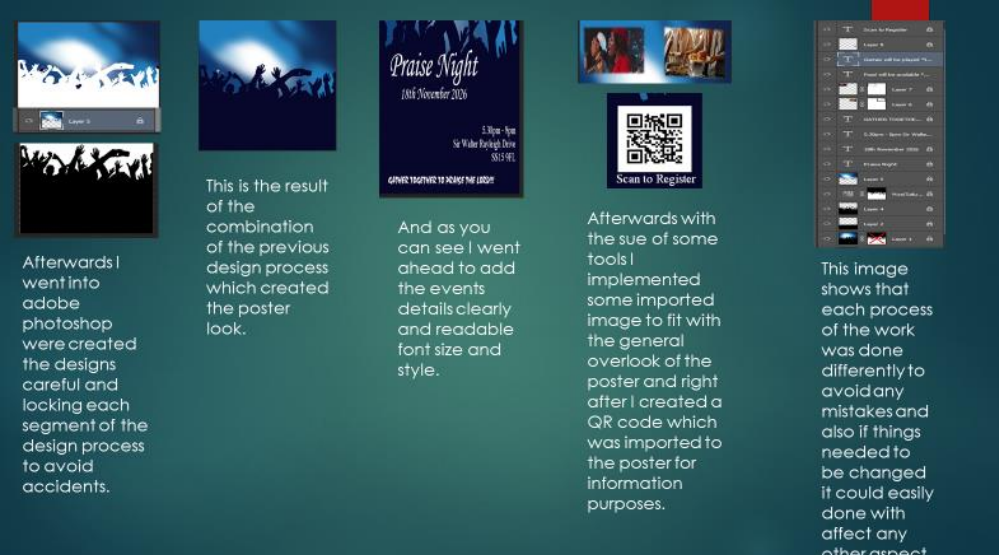

These images are what I dreamed for the project. These are variation for the project; visualisation diagram which I made. Each image had a unique style to them but I had to pick which I preferred the most but ultimately I combined them to make a killer poster.

I incorporated the hand figures from the image and the

I incorporated the people figure format to the poster but position them differently.

These is the initial sketch made although not readable, all ideas came from this inspiration.

This is just a detailed poster but it had no sparks.

Afterwards I went into adobe photoshop were created the designs careful and locking each segment of the design process to avoid accidents.

This is the result of the combination of the previous design process which created the poster look.

And as you can see I went ahead to add the events details clearly and readable font size and style.

Afterwards with the sue of some tools I implemented some imported image to fit with the general overlook of the poster and right after I created a QR code which was imported to the poster for information purposes.

This image shows that each process of the work was done differently to avoid any mistakes and also if things needed to be changed it could easily done with affect any other aspect

Hence, this is the poster!!

The poster has met the client brief needs successfully but the only issue is that it uses both vector and raster elements which the client specifically said vector graphics. The poster is presentable to viewers because it creates a safe and calm atmosphere. It also very modern because it includes a QR code that is accessible to all. The poster is an informative poster which is clearly illustrated and will be used to gage viewers into a marvellous events for all age groups and gender.

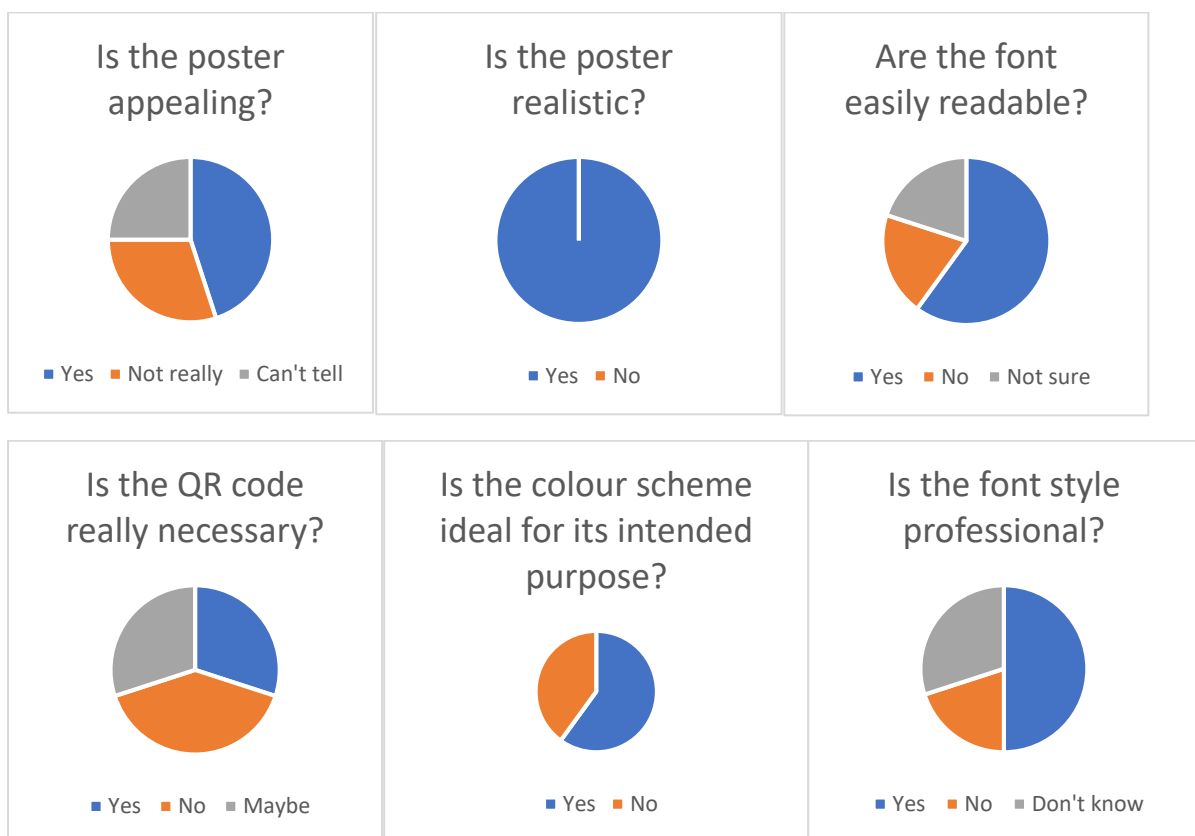

Afterwards I compared the poster with another design similar to mine to see if I adhere to cohesive standards and meet required professionalism and with that being done, the project presentable to the client and thereafter could be used for its intended purposes.

Presentation to peers/client/audience

Audience	Feedback	Response
Mrs Curd	The images you have used at the top of the posters clearly give the idea of what the event includes. The silhouettes at the bottom in the deep blue, complement the lighter blue, graduated background above. The font in white stands out well but I think I would have chosen a font that is a little less decorative so that the information is a little clearer. Or might also have been tempted to put the pictures at the top into an elliptical shape to soften it further.	Thank you for the feedback. I appreciate how the imagery and colours work well. Next time I will consider using less decorative fonts and explore different shape for the top images to improve visual flow.
Mr Vano	I really like the high contrast colour scheme you have adopted. It creates an eye catching a dramatic look. And your choice of colour is good as the blue gives a sense of harmony and peacefulness. The combination of the two create an interesting visual experience. The use of silhouette imagery also creates a bold and eye-catching design. Finally, you have created a symmetrical layout which again gives a sense of the peace and harmony you were going.	Thank you for the feedback. I am glad the colour scheme, silhouettes and layout created such a masterpiece. Your feedback really encourages me to believe that the design will have an effect on its intended audience.
Emma	I really like the silhouettes in the background. The font size is visible. The colour scheme also stands out to me. The poster shows off the key events that will take place with timings and photos. To improve the poster, the use of manipulation tools to change the colour property of the image will make it better.	Thank you for your feedback, really appreciate the time you took to do this. I am grateful that the overall colour scheme is appealing to everyone which tells me it will appeal to its audience and really appreciate how commented on the silhouettes because the positioning was really spot on but although the poster had issues with the manipulation tool, I'd like to say that it gives the poster more energy.
Riley	I like how the silhouettes of the people in the fore ground contrast with the lighter blue in	Thank you for the feedback. I am glad that the visual and information came across well

	the background. The use of images at the top tells an audience what will happen at the event. It has good information such as the date and location so its informative. Overall, I think it's a good poster for advertising a concert. My only issue is that the outline of the images is cutting into the image where it is has been blended into the background.	which was what I was hoping on. I appreciate you pointing out an issue but unfortunately, I won't be able to adjust that as I am in the publishing stage of my work. Thank you for the feedback.
--	---	---

Questionnaire

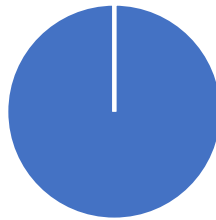

Is the poster
appealing to both
genders?

■ Yes ■ No

Is the poster
informative?

■ Yes ■ No

Are the imported
images useful in
demonstrating what
goes on at the event?

■ Yes ■ No

Does the poster
make you want to
attend the event?

■ Yes ■ No ■ Maybe
